

Beyond Bounds Player Manual

What is the game

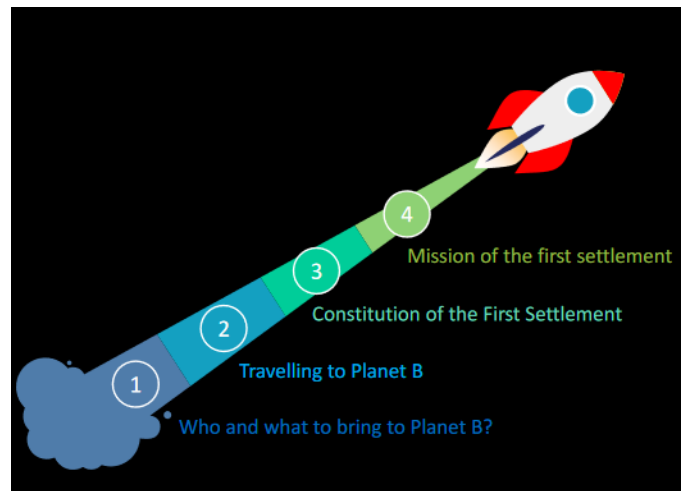

Beyond Bounds is a cooperative game where you are part of a team that is sent on a journey based on the IdeaSquare Planet (i2p) cycle that also matches with CERN's DNA. The i2p cycle can be explained through the following image, with the journey back to planet earth being included in the game.

The Goal- How to win

The goal of the game is to successfully complete the i2p cycle, and having enough resources to reach the end of the game. The players need to manage their resources, complete tasks in order to gain resources, and collaborate towards resolving the Event Cards to achieve the best possible outcome.

If the water supply is less than 0 the game is over.

The game is 2-4 players, with leaders needing to manage the different resources to survive.

How to set up

The game starts with all supplies on the Supply Tracker (ST) being at [5], with the rest of the tokens, such as the Time Tracker (TT), the research tracker (RT) at 0.

Place all the corresponding deck of cards to match with the game mat. This applies to the Supply Tokens, Timer Token, Research Tokens, Event Cards, Character Cards, Task Cards, and the d10 die. Place the i2p Tracker Token on the i2p cycle tracker. Keep the Hero Cards separate as they are not part of the game board.

How do you use the trackers

The way the Trackers are used is to place the corresponding token on the number it is supposed to represent. As examples: If you have 5 of each supply, each token is placed on the number 5 on the Supply Tracker (ST). If you have less than 0, you keep the token to the left of zero. If you have 10, you keep the token to the right of the nine, a supply cannot be greater than 10.

What are Event Cards (ECs)?

Each phase is concluded with drawing and playing a number of Event Cards (EC). Each EC is a random event that occurs during the journey. These lead to situations that can (either positively, negatively, or indifferently) affect the situation and resources on the journey.

What do the supplies do?

Each supply has a distinct role, with each one having a consequence if it runs out

- Water provides the crew with essential water.
 - If you run out of Water, the crew is doomed as they have no water so the mission fails, and the game is over.
- Food provides the crew with food.
 - If you run out of Food, all of the players take a -2 to all their task checks.
- Medical, helps the crew and characters be physically and mentally healthy.
- In phase 4, Medical Supplies can be used to make the crew return from the Medical Bay pile, and be able to become active again.
 - Example: You use a character and then they are placed in the Medical Bay. They will remain in the medical bay until you spend 1 supply to bring them back.
- Energy helps the heroes perform better, as it can be used as a boost to perform tasks. In phase 4, Energy Supplies can be used to add +1 bonus per point spent to any task check.
 - As an example, say you need to roll a 7+ and you take the d10 and roll a 3. Assuming your hero and crew member doesn't add any other bonuses, you can choose to spend 4 energy supplies to get up to a 7 and turn the roll into a success.

How to play

To start the game, each player needs to choose a Hero they want to play as. Each Hero will have stats. A stat represents a skill, either it be Intelligence (Int), Physical (Phy), Morale (Mor), or Engineering (Eng). These stats will be used in skill checks, with a skill check occurring through Event Cards or Task Cards. A Check is a challenge for a player to succeed in something. In order to succeed, the player who pulls the card will need to roll a d10 and roll higher than the number required. As an example, it could be that a 5+ Int check is required to succeed, meaning you need to roll a 5 or higher on the d10 to succeed. After rolling, the player would add the relevant bonuses to determine the total.

As an example a player chooses to play as the "Bastion of Hope" Hero, they have a 1 in Int and Mor, while having a -1 in Phys and Eng. For every Int or Mor check, they add a +1 to their total, while for any Phys or Eng check they add a -1 to their total. So if the player rolls a 5 on the d10 for an Mor check, it would mean that their result is a 6. If they rolled the same thing for an Eng check it would total to 4.

A player can boost their total number through the use of energy and abilities. As mentioned previously, upon rolling a player can choose to use as many energy points as they wish in order to add a +1 per energy point used to their roll. The number of energy a player wants to spend **MUST BE DECLARED BEFORE ROLLING**. So if someone sees that they need to roll a 5+, they can preemptively decide to use 3 energy points. They roll the d10, get a 2, add the 3 energy, then the total becomes 5. Once the roll is resolved, you remove energy spent from the supply tracker.

Abilities come in the form of Hero's abilities or Character abilities, a Hero card is chosen at the start of the game and can be used at any time. A character card is brought with you on your journey and can be chosen before you know what your task is.

Different Phases

Phase 2- Traveling to Planet B:

Pull an Event Card(EC), read it, and deal with the consequences, pull 3 EC in total.

Once the ECs are completed, and effects are marked down, go to the next phase.

Phase 3- Constitution of the First Settlement:

Pull an EC, read it, and deal with the consequences, pull 2 EC in total.

Once the ECs are completed, and effects are marked down, go to the next phase.

Phase 4- Mission of the First Settlement:

In this phase of the game, is where most of the game occurs. Here you are tasked with becoming self-sufficient and surviving on the planet for 5 years.

The Time Tracker (TT) is used to mark the passage of time. It starts at 5, and ends at 0. TT goes down by 1 every time a round is completed. A round is completed when every player has had their turn. Once the TT is set to less than 0 the mission is over, and the game ends. If any supply is 0 or less, the game is lost.

A turn starts with the player having to decide which supply they want to work on. They then pull a task card. Once they receive their task, they may choose a crew member (who is not in the medical bay) to help them with the task. If the task is completed successfully, (you roll high enough) the supplies of the respective team are earned, if failed (you dont roll high enough) you gain no supplies. If the power of the crew member was used, place the character in the medical bay, if not keep them in the crew pile.

Once this has been resolved, the next player in clockwise order does their turn.

Once all players have completed their turn, the group gains a Research point. The crew must then decide where they want to put their RT point.

During the Research part of this phase, the players are encouraged to openly discuss with each other what they believe is the best option to go forward. If there is a stalemate in the voting, then no points are added to the research tracker, and instead the time is wasted. This is because the crew was not able to successfully cooperate and make a decision.

Once the research point has been assigned, 1 EC is drawn and dealt with.

Once the EC is completed, lower all the Supply Tracker (ST) and the Timer Tracker (TT) by 1. This marks the start of a new round and now the next person clockwise starts their turn.

Researching:

What does it do:

They can spend this research point on any supply field they want to. The benefits received are universally the same, the difference is which supply they want to improve.

How it works:

Each tier is the same buffs, it's just that the buff changes what supply it is for. The GM will have the table present, the players will only know what the tier does, once they discover it.

	+1 to roll in that field	Roll 2 d10 and take the higher result for that field	Factor .5 production increase (you get 5 supplies instead of 1)	Roll 3 d10 and take the higher result for that field	Factor 1 production increase (you get 10 supplies instead of 5)
